

## TABLE OF CONTENTS

### SERUM PREPARATION

- Bleeding Procedures
- Immunization Protocols
- Allotype Immunization results
- Production of Rabbit Antisera
- C' Absorption

### CELL PREPARATION

- ACK Red Cell Lysing Buffer
- Hemolytic Geys Technique
- Preparation of Fluorescen or Rhodamine Labelled Chicken Red Blood Cells
- Bone Marrow Removal Technique
- Dissection of Mouse Spleen
- Glass Wool Technique
- Preparation of Buffy Coat
- Counting Cells: Coulter Counte, Hemacytometer
- Procedure for cell counts & viabilities using
  - Acridine Orange/Ethidium Bromide (AG/EB) or
  - Fluorescein Diacetate (FDA)
- Lymphocyte Extraction Technique (Ruthie's)
- Separation of Lymphocytes Using Ficoll-Hypaque Gradient (Strober's)
- Velocity Sedimentation Cell Separator-1 G Gradient
- Ficoll-Isopaque Technique
- ID of Dead Cells in FACS Cloning Procedure
- Leucoprep B\*D

### Solutions \*

- \* Also see "Formula Cards" Book
  - Cell Counting Solutions
  - Neutrel Buffered Formal Saline
    - 10% Formalin
    - 1 % Formal Saline for Coulter Counting
  - Trypsinization Reagents
  - Sodium Azide (NaN<sub>3</sub>)
  - Hepes Buffer for RPMI-1640
  - Balanced Salt Solution (BSS) - (Chuck's for Mishell-Dutton)
  - Dulbecco's Phosphate Buffered Saline (PBS) Preparation
  - Iso-Mem Preparation
  - Ethelenediamine Tetraacetic Acid (EDT A or Versene)
  - ACD Solution
  - Antibiotics for Irradiated Mice
  - Preparation of Glutamine for Tissue Culture Media
  - Preparation of Pen-Strep for Tissue Culture Media
  - To Calculate Molarity of a Solution when only limited Information is given on the label

### SEPARATION OF T AND B CELLS

- Nylon column
- Anti- Theta Treatment
- Preparations for Cell Separations
- Human White Cell Separation

## ANTIGEN PREPARATION

- TNP Conjugation to SRBC and BRBC for Hemagglutination
- Polymerization of Proteins
- Alum Precipitation
- KLH Preparation
- Preparation of KLH-HGG coated fixed SRBC
- CrCl<sub>3</sub> Coupling of HGG-KLH and Polymerization of SRBC
- Preparation of DNP-LKH, HGG
- Use of Biotin-Activated Esters for Protein Conjugation

## CULTURE OF LYMPH AND SPLEEN

- Mishell-Dutton Cultures of Spleen Cells
- Preparation of Human Leukocyte Cultures for Chromosome Analysis
- Mixed Lymphocyte Reaction and Mitogen Stimulation
- Preparation of Tissue Culture Cells 3H- Thymidine Pulsed Prior to Counting in Scintillation Counter

## Ab PURIFICATION

- Absorption of serum Ab with Lymphoid Cells
- DE-52 Column Chromatography and Separation
- Sepharose 4B Conjugation
- Preparation of Immunoabsorbents
- Whatman Information Leaflet

## Ab ASSAY: A 3f

- Radioimmunoassay-see Theta
- Cunningham Plaque Assay
- Cytotoxicity Assay-Cr<sup>51</sup>
- Hemagglutination Procedure - Testing, Red Cell Ag in Sera
- Hemagglutination Technique - Ag coupled to Red Cells
- Ion Agar Electrophoresis
- Phage Inhibition
- Electrophoresis
- High Voltage Electrophoresis
- Immunoelectrophoresis
- Ouchterlony Technique
- Precoating and Pouring of Agar Slides
- Elisaspot Assays

## CELL STAINING

- Microtiter Staining Method
- Membrane Fluorescent Antibody Staining
- Mithramycin Staining
- Cytoplasmic Fluorescent antibody Staining
- FDA Vital Cell Stain
- F-KLH Staining Procedure
- Pronase Stripping of Membrane Immunoglobulin in Rabbits & Mice
- Wright-Geimsa Stain
- Wright-Geimsa Stain - Blood Smears
- Autoradiography of Cell Smears
- Cytochemical Identification of Monocytes
- FITC Labelling in suspension (Mike Hatfield Method)

## "LABELLING" OF GLOBULINS WITH FLUOROCHROMES AND RADIOACTIVITY

$I^{125}$  Labelling of Proteins

FITC of RITC Labelling of Antibody - Concanavalin A (Floresceination)

Solid Phase Iodination Technique

## FIXATION OF CELLS

Formelin Fixation of Cells

Gluteraldehyde Fixation

## "RADIOLABELING"

NP-40 Extraction, Immunoprecipitation, and Polyacrylamide Gels

35S-Methionine Labelling of Lymphocytes and NP-40 Extraction

Immunoprecipitation of Radiolabeled Proteins from NP-40 Extracts

TCA Precipitation for Determination of Radioactivity

Two-Dimensional Gel Electrophoresis

Membranes and Microspheres

Isolation of Plasma Microspheres

Coupling Protein to Microspheres

Standard Protein - Microsphere Coupling Procedure

Binding of Microspheres to Hybrid Cells

$I^{125}$  Labelling of Surface Proteins Using Lactoperoxidase

Iodegen Tubes

## MISCELLANEOUS

Operation of Packard Scintillation Machine for 3H

Irradiation Procedure on Phillips x-ray

Preparation of 3 X 5 Lantern Slides

Use of Cytocentrifuge

Operation of Cavalli's cell Freezing Appatus Osmometer Procedure

Photography Settings for Slides

Bulb Change - Right Hand Scope )

U. V. Light Change of Wild Scope - Left Hand Scope

Micro Lowry: Quantitative Protein Determination

Lowry Procedure

Washing of Dialysis Membrane for Marbrook Cultures

Physiochemical data of Haptens used in the adoptive transfer of the secondary humoral immune response

Extinction Co-efficient for some proteins

Proteins (Myeloma) = Groups (Class) = Allotype

Sterile Hood Inspection

Tissue Culture Rules

Centrifugal Force Charts

Radioactive Isotope Decay Chart

Preparation of BP33V

"Assay Method" - Pete

Instructions for HIP Calculation of  $I^{125}$  Assay

Skin Grafting

Stockroom - Matings - Wearing

Reagents for 2D gels

Growth of Rat x Mouse Hybrids

Isolation of Plasma Membranes

Autoradiography of Cell Smears

Prep of 7L of Rhd labeled Chicken RBC
